

Sieco Update process

Important note:

The manual update process has risks of irreparable damage to the equipment, if it is not carried out correctly and under technical supervision.

The FW update process should only be applied in cases of malfunction and with prior

authorization from the Technical Support department.

Otherwise there is no guarantee for damage during update processes.

Steps:

Step 1: Copy the firmware file corresponding to your Sieco device to an SD card (SD card format must be FAT32).

Step 2: Rename the file to the following name: G0k5G1TS.bin

Step 3: Insert the SD card into the device

Step 4: Turn on the device (if it has a power button, you must turn it on by pressing the power button).

Step 5: Wait 3 minutes for the update to complete.

Observations:

1.- Once the update is complete, the device will automatically restart and emit a startup sound indicating that the update was completed successfully.

2.- The device must not be turned off during the update otherwise it may become unusable

3.- Once the upgrade is complete, the file name on the SD card will be renamed to "upgrade_ok.bin".
